

hello world!

Jayalakshmi Venkatesan

C:\jaya\about.txt

About Me

Jayalakshmi Venkatesan

I'm a third-year CSE student at NIT-W, pursuing a minor in Management. I grew up in Chennai, TN and had no idea I'd end up studying CS. My interests were mostly in the sciences, I loved math, and figuring out the 'unknown'. Thus began my obsession for SPACE. And since then, after a couple weird choices, I ended up choosing CS, and through that found my love for Machine Learning, Autonomous Systems, and anything but making websites (I didn't particularly enjoy making this website as well, sorry!)

I'm excited to continue my journey in ML, DL, and other domains, and hopefully make use of my skills to contribute to society in a meaningful way. I also have a huge passion for the arts (music and dance) and I try to focus my efforts on that as well.

Studying	B.Tech Computer Science & Engineering
Minor	Management
Institute	National Institute of Technology, Warangal
Year	Third CGPA 9.31
Based in	Chennai, TN
Currently	Building drone software for SAE India's Aerothon challenge!

C:\jaya\projects.exe

Projects

JurisNet

A multi-agent RAG system that automates Indian Civil Procedure Code compliance checks. I led agent orchestration across a five-stage LangGraph pipeline and built a deterministic boolean-lattice aggregator over hybrid retrieval. It placed Rank 1 in Round 1 of IIT Kharagpur's Agentic RAG Hackathon 2026.

LangGraphRAGNeo4jQdrantBM25Python

[Code on GitHub](#)

VulnHGNN

A self-healing vulnerability detector built on heterogeneous graph neural networks. It runs a multilabel classifier over LLVM IR call graphs to flag five CWE classes (476 / 119 / 190 / 191 / 369) and prototyped code for healing vulnerabilities.

PyTorch GeometricLLVMFlaskPython

[Code on GitHub](#)

Autonomous Drone Software

Part of the software and autonomy stack for a 10-member team in SAE India's drone challenge. I built a ROS2 + Gazebo simulation with a BCD planner, plus OpenCV-based QR detection for target ID. I'm now integrating PPO-based RL for obstacle avoidance. The team was shortlisted in the top 30 of 400+ nationally.

C:\jaya\beyond.mp3

Extra Curriculars

Carnatic Music & Bharatanatyam

Thirteen-plus years of singing and dancing, and performing with the college Music Club, at inter-college stages as a vocalist.

Literary & Debate

With the Literary & Debate Club I led "Humans of NITW," a storytelling series spotlighting humanitarian work around Warangal, and helped run events that drew 500+ people.

Game Dev

I have explored Godot and GDScript, and find coding the funnest when developing a game.
